

The calibrated neural deploys a time-flat geodetic BACKGROUND, not triggering (total forecast constant across windows; ratio 30/7)

1-7 day horizon

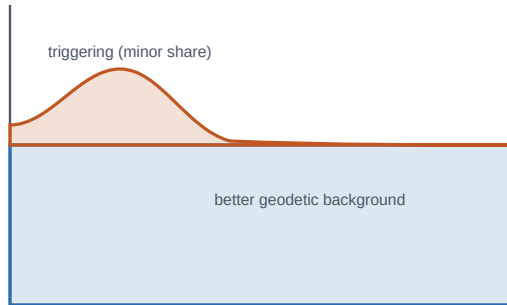

integral dominated by triggering

**neural does NOT beat ETAS**

mean IGPE vs ETAS = -0.053 (4/8 windows)

30 day horizon

integral dominated by background

**neural BEATS ETAS (robustly)**

global IGPE +0.115 (9/10, n=2166, CI excl. 0)
